Patented, round, flexible, polyolefin foam rod made of a non-absorbing outer skin and a resilient interior network of both open and closed cells that does not out-gas when ruptured.

Features
- Easy to apply
- Non-gassing
- Non-exuding
- Chemically inert
- Virtually dust-free
- Non-absorbing
- Meets all of the requirements of the 1990 Clean Air Act
- Is a “Domestic End Product” as defined in the Buy American Act, Title 41 USC 10

Using 25% compression.

### Description
Type: B - Per ASTM C 1330. Cylindrical, flexible sealant backings composed of bi-cellular material. Also Reference ASTM C 717 for use as gasket or sealing material..
FORM: Round Foam Rod.
TEMPERATURE LIMITS: 45˚F to +160˚F.

### Benefits
Backer rod limits the depth of the sealant and prevents excessive sealant use. It also helps sealant assume optimum shape factor to prolong sealant service life and acts as a barrier to the flow of sealant through the joint.

### Applications
Common applications include, but are not limited to, expansion and contraction joints, window glazing, curtain wall construction partitions, parking decks, bridge construction, modular home gasketing, and log home chinking.
Joint Preparation and Installation
Just prior to placing the backer rod, clean all joints per the sealant manufacturer’s recommendations. Thoroughly remove any concrete form-release agents, curing compound residue, laitance, or any foreign materials. To ensure a good sealant bond, joints must be clean and dry when the new sealant is installed. Air compressors used for this purpose must be equipped with traps for removal of oil and moisture. Install the backer rod at the depth recommended by the sealant manufacturer with a blunt tool.

Size Selection - Proper size selection is important as it controls the depth of the sealant bead. It must be oversized (25-50%) to fit tightly into the joint and function as a bond-breaker to prevent back-side adhesion of the sealant.

Compatibility - Bi-cellular polyolefin foam is basically an inert material; and therefore, it is compatible, both physically and chemically, with virtually all known cold applied sealants, including self-leveling types.

Precautions - Do not puncture, over compress or stretch backer rod during insertion. Do not use with hot applied sealants. Tests for outgassing of cold applied sealants shall be made in accordance with ASTM Test Method C 1253. Sealant compatibility should be confirmed by the sealant manufacturer. Compatibility characteristics of sealants in contact with sealant backings can be determined by ASTM Test Method C 1087.
